

## FIXED INDEX ANNUITIES

### A historical look at diversification by index and crediting strategy

Fixed index annuities (FIAs) generally offer a wide variety of accounts linked to an index – and for good reason: each index performs differently through varying market cycles. A point-to-point cap strategy linked to the S&P 500®, for example, tends to perform well during stable growth, while an averaging strategy may stand out when stocks are more volatile.

Clients with EquiTrust FIAs also benefit from growth achieved in other asset classes, with protection of their principal against market volatility. Diversification is achieved through accounts linked to volatility-controlled indices, such as Barclays Focus50 and S&P MARC 5% Excess Return Index.

#### MarketPower Bonus Index®

This table ranks annual index strategy performance from 2012 to 2023, assuming rates in effect 01/24/2024.<sup>1</sup>

2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023

- **Five of the six** strategies earned a top ranking in at least one year.
- In years of negative or zero S&P 500 Index change, **only two years resulted in zero credits** among all strategies.

By diversifying premium among a variety of strategies — and among indices — your clients may realize more consistent overall performance than going “all in” on a single strategy. This can also help reduce the temptation to chase past results by reallocating.

### **A fixed index annuity for all seasons**

MarketPower Bonus Index features a 14-year design, eight index-linked strategies with competitive rates and a history of strong renewal rates. Three account options are linked to the Focus50 or MARC 5% indices.
